International application No. PCT/IL99/00467

Reference is made to the following documents:

D1: EP-A-0 548 848

D2: WO-A-98/18103

D3: PATENT ABSTRACTS OF JAPAN vol. 017, no. 357 & JP-A-05 052950

D4: PATENT ABSTRACTS OF JAPAN vol. 1998, no. 09, & JP-A-10 111306

Re Item V

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Document D1, which is regarded as the closest prior art, describes a method of optically detecting the displacement of a sheet of material 110 (p. 10, l. 36-41 and Fig. 14) with a Doppler displacement sensor 111 measuring the velocity v of the moving sheet (p. 8-9).

The problem the present invention seeks to solve is to provide an alternative method based on a Doppler shift for measuring displacement of a sheet.

The problem is solved by a method according to claim 1 wherein movement of a sheet 9 (see Fig. 1) at a position is detected (20) by determining if the power of Doppler shifted energy between radiation illuminating the position and radiation reflected at the position within a band of Doppler frequencies is above a threshold V_t .

No hint or indication to the above mentioned feature was found in the teachings of the cited prior art documents. Document D2 describes an edge detection method based on detecting the vibration (see Fig. 9) of a stylus 23 when a sheet moves over the stylus. Document D3 describes a Doppler method for measuring the speed and shapes of travelling bodies using two radar detectors 10a, 10b. Document D4 describes a Doppler motion detector based on speed detection.

Consequently, having regard to the available prior art, the subject-matter of claim 1 appears to be new and to involve an inventive step within the meaning of Articles 33(3) and 33(3) PCT.

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/IL99/00467

2. The dependent claims 2-27 relate to particular embodiments of the method and likewise appear to meet the requirements of Articles 33(3) and 33(3) PCT.
3. Since it appears that the claimed invention can be made or used in a technological sense in industry, the claimed invention appears to have industrial applicability within the meaning of Article 33(4) PCT.

Re Item VII

Certain defects in the international application

A document reflecting the prior art described on page 1, l. 5-14, is not identified in the description (Rule 5.1(a)(ii) PCT). Further, the relevant background art disclosed in the document D1 is not mentioned in the description, nor is this document identified therein.

The description (e.g. page 2, l. 12-30) is not in conformity with the claims as required by Rule 5.1(a)(iii) PCT. Furthermore, the invention is not disclosed in such a way that the technical problem, or problems, with which it deals can be appreciated and the solution can be understood (see also the PCT International Preliminary Examination Guidelines, II-4.6).

The features of the claims are not provided with reference signs placed in parentheses (Rule 6.2(b) PCT).

Line 3, p. 2 and l. 10, p. 6 ('grating') contain some typographical errors.

On page 8, l. 32-33, it is stated that 'Circuit 50 also includes decision logic 74 which utilizes the outputs of the elements 62, 58, 78 and *amplifier* 76 to determine the velocity,...'. However in Fig. 4, the amplifier 70 is not connected directly to the decision logic 74 but via comparator or Schmitt trigger 76.

Re Item VIII

Certain observations on the international application

In claim 1, it is stated that the method comprises *illuminating* a position with

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/IL99/00467

radiation. Illuminating is normally construed as involving light (i.e. visible or invisible) or in other words comprising optics. Consequently, it appears that either claim 4 is redundant or claim 1 is unclear (cf. Article 6 PCT).

The embodiment of the invention described on page 10, l. 32 (i.e. non-optical) does not fall within the scope of the claims. This inconsistency between the claims and the description leads to doubt concerning the matter for which protection is sought, thereby rendering the claims unclear (Article 6 PCT).
